Bitcoin Blockchain

The Department of Computer Science and Engineering, Sri Venkateswara College of Engineering conducted a Online webinar titled **Bitcoin Blockchain on 17th May 2020** in Facebook Live Streaming. The guest speaker was **Mr.Abishaik Mohan (SVCE - Alumni) Software Engineer, Extreme Networks Chennai**. The Session started with the introduction of the speaker and importance about the Bitcoin Blockchain by Dr.R.Anitha Prof Head/CS.

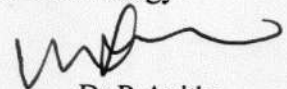

Blockchain is the technology that enables the existence of cryptocurrency (among other things). Bitcoin is the name of the best-known cryptocurrency, the one for which blockchain technology was invented. Mr.Abishaik Mohan started the session with the introduction to Blockchain Technology and how it deals with the Core Concepts like Public key cryptography, Digital Signatures, Peer-Peer Network and Blockchain Protocol. Also Speaker elaborated on working principles of Merkle Tree with explanation about Simplified Payment Verification and elaborated with various challenges of Attacks.

Further Session lived by a visual demo comprising of hash, block and Blockchain Transaction by designing Blockchain instance - Network protocols/Handshaking, Block Parameters, Key Management, Permissions, Multisignature and Rewards. The session ended with discussion on applications and challenges of Blockchain Technology for few Real time Applications and he gave an overview on interesting facts and current research on Blockchain Technology.

Outcome of the webinar:

Participants would have gained knowledge in the following perspectives:

- Knowledge on Bitcoin Blockchain technology.
- Understand the concepts of what happens after the block is formed and how much effort needed to tamper the block.
- Concepts such as Merkle tree and various attacks -Double spending , Eclipse attack were studied.
- Know the fact of trilemma between the level of Scalability, Security and Decentralization in current research of Blockchain Technology.

Assume five persons exchanging transactions among one another and let one among them (C) note down the transactions in a chronological order along with balances.

Transactions

1. A gave 3 coins to B
2. B gave 5 coins to C
3. C gave 3 coins to D
4. D gave 4 coins to E
5. ...

Problem?

Transactions

1. A gave 3 coins to B
2. B gave 5 coins to C
3. C - B gave 3 coins to D
4. D gave 4 coins to E
5. ...

Traditional banks were similar to C in noting down the transactions in a chronological order.

Challenges

1. The network of transactions grew. How could we scale and make it errorless?
2. What if C is dishonest and manifests the transactions for his own benefit?
3. How do we trust the entire system?

Solution
