PROGRAM SUMMARY

3D Printing: 3D Printing is a process for making a physical object from a three-dimensional digital model, typically by laying down many successive thin layers of a material. It brings a digital object (its CAD representation) into its physical form by adding layer by layer of materials.

3D Printing objectives

1. Development of feedstock customised for 3D-printing (AM) at reduced cost
2. Design and build next generation of 3D printers and strategies specifically dedicated to ceramics production (net-shape ceramics faster with desired properties & design at reduced cost)
3. Correlate input to output produced ceramics and demonstrate it for applications
4. Define and establish standardisation, regulatory issues, qualifications, and risks analysis
5. Increases knowledge on modelling & characterizations and develops specific tools for that.

3D Printing benefits:

1. · Faster and more Production.
2. · Easily Accessible.
3. · Better Quality.
4. · Tangible Design and Product Testing.
5. Cost-effectiveness.
6. Creative Designs and Customization Freedom.
7. Unlimited Shapes and Geometry.
8. Can Implement Assorted Raw Materials.
9. Less Waste Production
10. Risk Reduction
