Revision No:	2	date ·	07.10.2022	Approved	08.10.2022				
	1	uate .	18.03.2022	date:	12.04.2022				
	17	The courses "Tamil la	inguage and Her	ritage of Ancient	Tamil Society" in				
	01	Semester I and "Scien	nce and Techno	logy in Ancient	Tamil Society" in				
	01.	Semester II are intr	roduced as per	r the recommen	dations of Anna				
		University/Governmen	t of Tamil Nadu						
	02.	The course "Technical	Drawing Laboration	atory" is introduce	ed in semester II				
		replacing "Engineering Drawing" of R2018. This will enable the students							
		to draw the circuit symbols using free hand sketches and simulation tools.							
	03	The course "Circuit T	The course "Circuit Theory" is shifted to semester II from semester III of						
	05.	R2018 and introduced	as Theory cum l	Practical Course.					
Salient Points of		The courses of R2018 "Engineering Mathematics III" and "Probability and							
the revision	04.	Random Processes" are replaced with the new course "Transforms and							
the revision		Random Processes" and the same is offered in semester IV.							
		The course "Environn	nental Sciences	and Sustainability	" is shifted to IV				
	05.	semester. This will	help the Later	al entry students	s to describe the				
		sustainable developme	nt for environme	ental protection.					
		The course "Machine	Learning" is in	troduced in seme	ster IV as Theory				
	06	cum Practical course.	This will enable	e the students to e	expose the various				
	00.	Machine Learning al	gorithms and i	mplementation of	f the same using				
		Python.							
	07	The course "Microco	ontroller System	ns" is introduced	as Theory cum				
	07.	Practical course in sem	nester IV.						

# SRI VENKATESWARA COLLEGE OF ENGINEERING,

(An Autonomous Institution, Affiliated to Anna University, Chennai – 600025) REGULATIONS 2022

# **B.E. ELECTRONICS AND COMMUNICATION ENGINEERING**

#### CHOICE BASED CREDIT SYSTEM

# PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- I. Create value to organizations as an EMPLOYEE at various levels, by improving the systems and processes using appropriate methods and tools learnt from the programme.
- II. Run an organization successfully with good social responsibility as an ENTREPRENEUR, making use of the knowledge and skills acquired from the programme.
- III. Contribute to the future by fostering research in the chosen area as an ERUDITE SCHOLAR, based on the motivation derived from the programme.

# PROGRAM OUTCOMES (POs)

# PO GRADUATE ATTRIBUTES

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication:** Communicate effectively on complex engineering activities with the

engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

- 11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

# PROGRAM SPECIFIC OUTCOMES (PSOs)

- 13. An ability to apply the concepts of Electronics, Communications, Signal processing, VLSI, Control systems etc., in the design and implementation of application oriented engineering systems.
- 14. An ability to solve complex Electronics and communication Engineering problems, using latest hardware and software tools, along with analytical and managerial skills to arrive appropriate solutions, either independently or in team.

Course	Outcomes:	<b>RBT*</b>
Upon co	ompletion of the course, students will be able to:	Level
CO1	Solve the Eigen value problems in matrices.	3
CON	Apply the basic notion of calculus in Engineering problems and to tackle for	3
	different geometries.	
GOA	Perform calculus for more than one variable and its applications in Engineering	3
003	problems.	
<b>CO4</b>	Apply definite integrals for design of three dimensional components.	3
CO5	Evaluate multiple integral in Cartesian and polar coordinates.	3
*Bloom	's Taxonomy (RBT) Level: Remember-1; Understand-2; Apply-3; Analyze-4; Evaluat	te-5;
Create-6	5

DH22151	APPLIED PHYSICS	L	Τ	P	С	
11122131	(Common to AD, CS, EE, EC, IT)	3	0	0	3	
COURSE O	BJECTIVES:					
• To en	hance the fundamental knowledge in Physics and its applications	s relev	vant	to		
variou	s Streams of Engineering and Technology.					
UNIT 1	LASERS AND FIBER OPTICS				9	
Lasers: popul	ation of energy levels, Einstein's A and B coefficients derivation	n – re	sona	nt ca	vity,	
optical ampl	ification (qualitative) - Nd-YAG laser - CO2 Laser - E2	xceim	er I	Laser	· _	
Applications.	Fiber optics: principle, numerical aperture and acceptance angle	e - ty	pes o	of op	tical	
fibres (materi	al, refractive index, and mode) - losses associated with optical	fiber	s–Fi	ber o	optic	
communication	on - fibre optic sensors: pressure and displacement - Endoscope.					
UNIT 2	QUANTUM PHYSICS				9	
Black body ra	diation - Planck's theory (derivation)- deduction of Wien's and Ra	yleigl	n Jea	n's la	aw –	
Compton effect	ct: theory and experimental verification - wave particle duality - e	lectro	n dif	fracti	on –	
concept of w	ave function and its physical significance - Schrödinger's way	ve eq	uatio	n –	time	
independent an	nd time dependent wave equations - particle in a one-dimensional	- thre	e di	mens	ional	
potential box-	Fermi distribution function – Effect of temperature on Fermi Function	ı – De	nsity	of er	iergy	
states – carrier	concentration in metals.	<u> </u>				
		1				
UNIT 3	CRYSTAL PHYSICS	1			9	
Single crysta	lline, polycrystalline and amorphous materials – single crystal	s: uni	t cel	I, cr	ystal	
systems, Bra	vais lattices, directions and planes in a crystal, Miller ind	ices	- in	terpl	anar	
distances- co	ordination number and packing factor for SC, BCC, FCC, F	HCP a	and	Diam	lond	
structure (qu	alitative) - crystal imperfections: point defects, line defects	– Βι	irger	vec	tors,	
stacking fault	s	1				
		1				
UNIT 4	WAVES AND OSCILLATIONS	<u> </u>			9	
Travelling wa	aves, Wave equation for string ,Energy and momentum, Reson	ance	Supe	rpos	ition	
& Reflection	n, Standing waves, Harmonic oscillations, Damped harmoni	c mo	otion	- Fo	rced	
oscillations, a	amplitude resonance - Expression for Resonant frequency, El	ectric	al an	ialog	y of	
mechanical of	oscillations, Quality factor and sharpness of resonance, Ele	ctrica	l an	alogy	y of	
mechanical of	scillators				1	
UNIT 5	ELECTROMAGNETIC WAVES				9	
Maxwell's Ec	quations. Vector and Scalar Potentials. Plane waves in Dielectr	ric me	dia.	Poyr	ıting	
Theorem and	Poynting Vector Electromagnetic (EM) Energy Density. P	hysica	al Co	oncep	ot of	
Electromagnetic Field Energy Density, EM Wave Propagation in Unbounded Media , Plane EM						
waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves,						
refractive index and dielectric constant.

C122151	(Common to AD, CS, EE, EC, IT)	3 0 0 3	3					
COURSE OBJ	ECTIVES:							
1. To make	the students conversant with basic electrochemistry and batteries.							
2. To devel	op an understanding of the laws of photochemistry and basics.							
3. To acqua	aint the students with the basics of nanomaterials, their properties and	uses.						
4. To acqui	ire the basic knowledge on sensors which are essential for the softwa	are engineer	rs					
for devel	lop new devices.							
5. To enabl	the students to understand the types of instruments for material analy	ysis and the	1r					
Working								
	ELECTDOCHEMISTDY	0						
UNIT I Electrodes and	alastrochemical colla clostrodo potential standard alastrodo pot	9 ontial aingl	10					
Electrodes and electrochemical cells – electrode potential, standard electrode potential, sin electrode potential and its determination, types of electrodes – calomel, quinhydrone and gl electrode. Nernst equation - Determination of pH of a solution by using quinhydrone and gl electrode. Electrochemical series and its applications. Batteries – Primary (dry cell) and second batteries (Lead – acid storage battery and Lithium ion battery) and next generation batteries								
UNIT II	PHOTOCHEMISTRY	9						
quenching of photochemistry.	fluorescence and its kinetics, Stern-Volmer relationship. App	blications o	n- of					
UNIT III	NANOCHEMISTRY	9						
Basics and sca molecules, nar nanomaterials, quantum confine	le of nanotechnology, different classes of nanomaterials, Distinct noparticles and bulk materials; size-dependent properties. S fabrication (lithography) and its applications – Basics of nanophed materials (surface plasmon resonance).	ion betwee ynthesis c notonics an	n of 1d					
UNIT IV	CHEMICAL SENSOR	9						
Sensors, sensor	science and technology, types of sensors. Chemical Sensors – charac	cteristics an	ıd					
elements. Electr	cochemical sensors – voltammetry, potentiometric sensors, amperome	etric sensors	s,					
polarization tech	nniques.							
UNIT V	INSTRUMENTATION TECHNIQUES	9						
Treatment of analytical data, including error analysis. Classification of analytical methods and the types of instrumental method - Electromagnetic radiation-UV-visible and IR spectroscopy: principles, instrumentation (Block diagram only) and applications. Separation techniques chromatography: Gas chromatography, liquid chromatography - importance of column technology (packing, capillaries), separation based on increasing number of factor (volatility, solubility, interactions with stationary phase, size)

f 1144J	(Common to all Branches except BT) 0	0	2
COURS	E OBJECTIVES:		
• T	o introduce different experiments to test basic understanding of physics con-	cepts	appli
ir	optics, thermal physics and properties of matter.		
LIST OI	<b>EXPERIMENTS:</b> (Any EIGHT Experiments)		
1. a) Det	ermination of Wavelength, and particle size using Laser.		
b) De	ermination of acceptance angle in an optical fiber.		
2. Deterr	nination of velocity of sound and compressibility of liquid – Ultrasonic Inter	fero	meter
3. Deterr	nination of wavelength of mercury spectrum – spectrometer grating.		
4. Deterr	nination of thermal conductivity of a bad conductor – Lee's Disc method.		
5. Deterr	nination of Young's modulus by Non uniform bending method.		
6. Deterr	nination of specific resistance of a given coil of wire - Carey Foster's Bridge	e.	
7. Deterr	nination of Rigidity modulus of a given wire -Torsional Pendulum		
8. Energ	y band gap of a Semiconductor		
9. Deterr	nine the Hysteresis loss of a given Specimen		
10. Calil	ration of Voltmeter & Ammeter using potentiometer.

N / A 000E1	APPLIED MATHEMATICS II	L	Т	P	С						
MA22251	(Common to all Branches except MR)	3	1	0	4						
COURSE O	BJECTIVES:										
The Student should be made to:											
1. Acquire the concepts of vector calculus needed for problems in all engineering disciplines and											
compute different types of integrals using Green's, Stokes' and Divergence theorems.											
2. Skilled at the techniques of solving ordinary differential equations that model engineering problems.											
3. Extend th	eir ability of using Laplace transforms to create a new domain in	whic	ch it	is ea	sier to						
handle the	problem that is being investigated.										
4. Explain g	eometry of a complex plane and state properties of analytic functio	ns.									
5. Understan	d the standard techniques of complex variable theory so as	to ar	ply	then	n with						
confidenc	e in application areas such as heat conduction, elasticity, fluid dy	ynam	ics a	nd f	low of						
electric cu	rrent.										
UNIT I	VECTOR CALCULUS				(9+3)						
Stokes'theore	em (excluding proofs) – Verification and application in evaluati rals.	ng li	ne, s	surfac	ce and						
		-									
UNIT II	ORDINARY DIFFERENTIAL EQUATIONS A APPLICATIONS	ND	]	ITS	(9+3)						
Differential e	quations of first order – Equations of the first order and first degre	e – I	Linea	r equ	ations						
- Higher ord	er linear differential equations with constant coefficients - Me	thod	of v	ariat	ion of						
parameters -	Cauchy's and Legendre's linear equations - Simultaneous first or	rder 1	linea	r equ	ations						
with constant	coefficients - Applications of Linear differential equations - 0	Oscil	lator	y ele	ctrical						
circuit – Defle	ection of beams.										
	VODE THE ZOOV										
UNIT III	LAPLACE TRANSFORM				(9+3)						
Conditions fo	r existence - Transform of elementary functions - Transforms of u	nit st	ep fi	incti	on and						
impulse funct	ions – Basic properties – Shifting theorems - Transforms of deriva	tives	and	integ	rals of						
functions - De	erivatives and integrals of transforms - Initial and final value theory	rems	- Tr	ansf	orm of						
periodic funct	tions. Inverse Laplace transforms - Convolution theorem - Appli	catio	n to	solut	tion of						
linear ODE of second order with constant coefficients using Laplace transformation techniques.											

UNIT IV	ANALYTIC FUNCTIONS	(9+3)
Analytic func	tions - Necessary and sufficient conditions (Cauchy-Riemann equations) - Pro-	perties
of analytic f	unction - Harmonic conjugates - Construction of analytic functions - Con	formal

of analytic function - Harmonic conjugates - Construction of analytic functions - Conformal mapping – Mapping by functions W = Z + C, CZ, 1/Z,  $Z^2$  – Joukowski's transformation- Bilinear transformation.

UNIT VCOMPLEX INTEGRATION(9+3)									
Cauchy's integral theorem - Cauchy's integral formula - Taylor's and Laurent's series expansions -									
Singular points - Residues - Cauchy's Residue theorem - Application of residue theorem for									
evaluation of real integrals – Use of circular contour and semi-circular contour.

COUR	SE OUTCOMES:	RBT*
	Upon successful completion of the course, students should be able to:	Level
CO 1	Comprehend the behavior of electrons in solids.	2
CO 2	Demonstrate an understanding of various properties of Semiconducting materials and their internal structure	3
<b>CO 3</b>	Analyse the properties of dielectric materials and apply them in various fields.	3
CO 4	Summarize basics of magnetism and superconductivity. Explore a few of their technological applications.	2
CO 5	Develop an understanding the Fundamentals of Electronic Science and its applications.	3
*Bloon	n's Taxonomy (RBT) Level: Remember-1; Understand-2; Apply-3; Analyze-4; Ev	aluate-5;
Create-	-6

EC22202	CIRCUIT THEORY	L 3	Т 0	P 2	C 4
COURSE O	BJECTIVES:	U	v	-	-
1. To and	alyze electrical network with suitable network theorems.				
2. To cla	ssify and analyze series and parallel resonance and coupled circuit.				
3. To det	termine the transient response of RL, RC and RLC circuits for AC and	DC	inpu	ts.	
4. To inf	er the concept two-port networks.				
5. To ske	etch the network topology.				
UNIT I	NETWORK THEOREMS FOR DC & AC CIRCUITS				12
Thevenin The	em,	Max	imu	ım	
Power transfe	er Theorem - Analysis using Dependent Current sources and Voltage so	urce	s.		
	A A GETTELGE				
UNIT II	RESONANCE AND COUPLED CIRCUITS				9
Resonance: S	eries and parallel resonance - Frequency response - Quality factor and	nd B	and	wid	th-
Selectivity-Ba	asic filter design.				
Coupled Circ	cuits: Self and Mutual inductance - Dot rule-Coefficient of coup	oling	_ ]	Line	ear
Transformer -	- Ideal Transformer - Tuned circuits – Single tuned circuits.				
	IT IT ON ISI				
UNIT III	TRANSIENT ANALYSIS				9
Basic RL and	RC Circuits, The Source- Free RL Circuit, The Source-Free RC Circuits	rcuit	, The	e U	nit
Step Function	n, Transient response of RL, RC and RLC Circuits using Laplace tran	nsfo	rm f	or I	ЭС
and AC input					
UNIT IV	TWO PORT NETWORKS				6
Characterizati	ion of two port networks in terms of Z, Y, ABCD and h parameters. I	nter	conn	ecti	on
of two port ne	etwork, Symmetrical properties of T and $\pi$ networks.				
		-			
UNIT V	NETWORK TOPOLOGY				9
Network term	ninology - Graph of a network - Trees and Co-Tree - Twigs and Lin	ks -	Inci	iden	ice
Matrix (A), I	Properties of Incidence Matrix (A) - Link Current and Tie-set Matr	ix (	B) -	Ти	∕ig
Voltages and	Cut-set Matrix (C) - Mesh Analysis and Nodal Analysis.				
	L:	<b>4</b> 5 I	PER	101	<u>)</u> S
Practical Exe	ercises:				
1. Verification	ns of KVL & KCL.				
2. Verification	ns of Thevenin & Norton's theorem.				
3. Verification	n of Superposition Theorem.				
4. Verification	n of maximum power transfer Theorem				
5. Determinat	tion of Resonance Frequency of Series & Parallel RLC Circuits.				
6. Transient a	nalysis of RL and RC circuits.				
/. Determinat	tion of $\angle$ and $\Upsilon$ parameters for the two port network.				
		20.1	<b>DEP</b>		
			TER	101	<u>75</u> 75

5. Load test on three phase Induction motor
6. Load test on single phase Induction motor
7. Study of 1kWp Solar PV System with Net meter
TOTAL: 45 PERIOD
LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS: (ELECTRON DEVICES)
Ouantity
BC107, BC148, 2N2646, BFW10 Required
1N4007. Zener diodes Required
Bread Boards 15
CRO (30MHz) 5
Function Generators (3MHz) 5
Multimeter 5
Dual Regulated Power Supplies $(0 - 30)V$ 10
Voltmeter and Ammeter Required
LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS: (ELECTRICAL MACHINES)
Quantity
1. Assorted electrical components for house wiring   2 sets
2. 1Kw Solar PV system 1
3. DC Shunt Motor - 1.5kW, 220V, 9A, 1500RPM, 1
4. DC Shunt Motor with Loading Arrangement- 3.5kW, 220 Volts, 18.6
4. DC Shunt Motor with Loading Arrangement- 3.5kW, 220 Volts, 18.6 1 Amps, 1500 RPM

6. Three Phase Induction Motor with Loading Arrangement- 3.7kW, 415V,	1
7.8A, 1430 RPM	
7. Single Phase Induction Motor with Loading Arrangement-1.5kW,	1
230V,9.9A,1440rpm	
8. Single Phase Auto Transformer- 4KVA, 0-270V, 50Hz	2
9. Three Phase Auto Transformer - 12KVA, 0-415V, 50Hz	2
10. MC Voltmeter- (0-300)V	3
11. MC Ammeter- (0-10/20)A	2
12. MC Ammeter - (0-1/2)A	2
13. MI Voltmeter - (0-300/600)V	5
14. MI Voltmeter - (0-75/150)V	2
15. MI Ammeter - (0-10)A	5
16. UPF Wattmeter (300/600V, 5/10A)	4
17. Single Phase Resistive Loading Bank- 5 KW)	2
18. Rheostats - $50\Omega, 5A, 700\Omega, 1.5A, 1000\Omega, 1A$ )	Each 2
19. Single phase Energy meter	1
20. Net meter	1
21. Fuse various ranges as per the requirement	Required
22. Wires As per the requirement	Required

COU	RSE OUTCOMES:	<b>RBT*</b>
Upon	successful completion of the course, students should be able to:	Level
CO1	Acquire the skill in examining a signal in another domain rather in the original domain by handling Full and Half Range Fourier Series.	3
CO2	Develops the skill of conversion between time domain to frequency domain using the concept of Fourier Transforms and Z-transform.	3
CO3	Express proficiency in handling higher order Partial differential equations	3
CO4	Reproduce and explain the basic concepts such as probability and random variable and identify the distribution. Acquire skills in handling situations involving more than one random variable	3
CO5	Apply the relationship within and between random processes	3
*Bloo	m's Taxonomy (RBT) Level: Remember-1; Understand-2; Apply-3; Analyze-4; Ev	aluate-
5; Cre	ate-6

EC22301	OBJECT ORIENTED PROGRAMMING AND DATA STRUCTURES	L	Τ	P	C
	S - 110 0 1 0 1	3	0	0	3
COURSE OB.	JECTIVES:				
1. To acqu	ire knowledge on core programming basics of C++ language.				
2. To poss	sess a fundamental understanding of an Object-Oriented Programm	ning	con	icep	ts.
3. To deep	pen the empirical knowledge on linear and non-linear data structure	es.			
4. To dev	elop logical thinking abilities to relate real world problems with	data	a str	ructu	ıre
concept	ts in an object-oriented style.				
5. To be fa	amiliar with different sorting and searching algorithms.				
UNIT I	DATA ABSTRACTION & OVERLOADING				9
Overview of C-	++ - Structures - Class Scope and Accessing Class Members - Refer	ence	e Va	ıriab	les
– Initialization	- Constructors - Destructors - Member Functions and Classes - Frie	end	Fun	ctio	n –
Dynamic Mem	ory Allocation - Static Class Members - Proxy Classes - Overloa	ding	g: Fi	uncti	ion
overloading and	l Operator Overloading.				
UNIT II	INHERITANCE & POLYMORPHISM				9
Base Classes a	nd Derived Classes - Protected Members - Casting Class pointers	s an	id N	1eml	ber
Functions – O	verriding - Public, Protected and Private - Inheritance - Types of	of I	nher	ritan	ce-
Constructors an	d Destructors in derived Classes - Implicit Derived - Composition	Vs. 1	Inhe	ritar	ice
- Virtual func	tions - This Pointer - Abstract Base Classes and Concrete Cla	sses	_	Virt	ual
Destructors – D	ynamic Binding				
UNIT III	LINEAR DATA STRUCTURES				9
Abstract Data	Types (ADTs) - List ADT - Array based linked list implementation	tion		Sing	gly
linked lists – D	oubly linked list - Polynomial Manipulation - Stack ADT – Evalua	ting	arit	thme	etic
expressions- Qu	eue ADT – Circular Queue implementation.				
	Call T Call				
UNIT IV	NON-LINEAR DATA STRUCTURES				9
Trees – Binary	Trees - Binary tree representation and traversals - The Search Tree	AD	)T -	Bina	ary
Search Trees-	- Application of trees - Graph and its representations - Graph	1 Ti	ave	rsals	; —
Representation	of Graphs - Breadth-first search - Depth-first search- Dijkstra's	s sh	orte	st p	ath
algorithm.	441				
UNIT V	SORTING AND SEARCHING				9
Insertion sort -	Shell sort - Selection Sort - Bubble sort - Merge sort - Quick sort	- Ra	ıdix	Sor	t -
Searching: Line	ear search – Binary Search.

#### **COURSE OBJECTIVES:**

EC22303

- 1. To introduce students with different coordinate systems and to understand the Theorem, Laws, Principle and their related problems over Static Electric Fields.
- 2. To learn the basic laws in Static Magnetic Field and able to find various parameters with the related problems.
- 3. To know how the Electric Field is applied in Dielectrics with various equations and applications and to understand how the Magnetic Field works with Ferromagnetic Materials.
- 4. To analyze how the Time is Varying in both Electric and Magnetic Fields with various derivation.
- 5. To understand and analyze the Electromagnetic Field distribution which forms the basis for advanced subjects related to Electromagnetic Field.

#### UNIT I STATIC ELECTRIC FIELD

Review of Co-ordinate System-Introduction to line, Surface and Volume Integrals-Meaning of Stokes theorem and Divergence theorem.

Coulomb's Law and Electric field Intensity-Principle of Superposition-Electric field due to discrete charges-Electric field due to continuous charge distribution-Electric field due to charges distributed uniformly on an infinite and finite line-Electric Field on the axis of a uniformly charged circular disc-Electric Field due to an infinite uniformly charged sheet. Electric Flux Density-Gauss Law and its applications.

#### **UNIT II** STATIC MAGNETIC FIELD

The Biot-Savart Law-Magnetic Field intensity due to a finite and infinite wire carrying a current I-Magnetic field intensity on the axis of a circular and rectangular loop carrying a current I-Ampere's circuital law-Force on a wire carrying a current I placed in a magnetic field-Torque on a loop carrying a current I

UNIT III	ELECTRIC AND MAGNETIC FIELDS IN MATERIALS	9
Poisson's and Boundary con	I Laplace's equation-Capacitance of various geometries using Lapla additions for electric fields-Point form of ohm's law-Continuity equation	ce's equation- for current.
Inductance of permeability-	of loops and solenoids-Energy density in magnetic fields-magn Magnetic boundary conditions.	etization and
	TIME VADVINC ELECTRIC AND MACNETIC ELEI DO	0
UNITIV	TIME VARYING ELECTRIC AND MAGNETIC FIELDS	9
Maxwell's Ec	juation from Ampere's Law, Faraday's Law and Gauss Law in both p	oint form and
Intergral form	and Time Varying Potentials.	

#### UNIT V **ELECTROMAGNETIC WAVES** 9 Poynting Vector-Instantaneous Average and Complex Poynting Vector-Wave Equation-Uniform plane waves-Maxwell's equation in Phasor form-Plane waves in free space and in a homogeneous

material-Skin	effect.

EC22305	SIGNALS AND SYSTEMS	L	T	' P	C				
COURSE O	BJECTIVES:								
1. To u	nderstand the fundamentals of signals & systems								
2. To an	alyze continuous time signals in Fourier and Laplace domain								
3. To ar	nalyze discrete time signals in Fourier and Z domain								
4. To st	udy the characteristics of continuous time systems								
5. To st	udy the characteristics of discrete time systems								
UNIT I	FUNDAMENTALS OF SIGNALS AND SYSTEMS				9				
Signals: Cont	inuous time and Discrete time - Elementary signals - Basic operations of	on si	gn	als-					
Signal proper	ties – Periodicity, Deterministic and Stochastic, Energy & Power								
Systems: Con	ntinuous time and Discrete time - System properties – Linearity:	addi	itiv	/ity	and				
homogeneity,	Time-invariance, Causality, Stability, Invertibility.								
UNIT II	ANALYSIS OF CONTINUOUS TIME SIGNALS				9				
Continuous T	ime Fourier Transform (CTFT) - Periodic and Aperiodic signals - Co	nve	rg	ence	of				
CTFT - Prop	perties: Linearity, Symmetry, Time shifting, Time scaling, Parseva	al's	th	eore	em,				
Convolution.					,				
Laplace Tran	sform - Unilateral and Bilateral Laplace Transform - Region of C	onv	erg	genc	e -				
Properties: Li	inearity, Symmetry, Time shifting, Time scaling, Initial and Final va	lue	th	eore	m,				
Convolution,	Inverse Laplace Transform.								
UNIT III	LINEAR TIME INVARIANT CONTINUOUS TIME SYSTEMS				9				
Differential E	quation - Impulse response - Convolution integrals and its properties	- A	na	lysis	of				
systems using	Fourier and Laplace transforms: Stability and Causality - Frequer	ncy	re	spon	se,				
Impulse respo	onse and Transfer function of LTI systems.	•							
UNIT IV	ANALYSIS OF DISCRETE TIME SIGNALS				9				
Sampling and Discrete Time shifting, Freq Z -Transform	reconstruction of signals: Sampling Theorem, Effects of under sampli e Fourier transform (DTFT) - Properties: Linearity, Periodicity, Synuency shifting, Time scaling, convolution, – Region of Convergence - Properties: Linearity, Symmetry, Time	ng: nme nme	ali try rsa	iasin ′, Ti al, T	g - me fime				
scaling, Time	e shifting, Differentiation, Convolution – Inverse Z - transform -	Re	ela	tion	ship				
between DTF	T and Z transform				-				
UNIT V	LINEAR SHIFT INVARIANT DISCRETE TIME SYSTEMS				9				
Difference eq	uation – Convolution sum and its properties - Interconnection of L	SI S	ys	tem	3 —				
Analysis of l	LSI systems using DTFT and Z transform: Stability and Causality	- F	re	quer	icy				
response, Imp	ulse response and Transfer function of LSI systems

- 7. S. Salivahanan, V S Kanchana Baskaran, "Linear Integrated Circuits", second edition, McGraw-Hill education India pvt ltd., 2015.

COU	RSE OUTCOMES:	<b>RBT*</b>				
Upon	Upon successful completion of the course, students should be able to:					
CO1	Infer the DC and AC characteristics of operational amplifiers and its effect on output and their compensation techniques.	2				
CO2	Elucidate and analyze the linear and non-linear applications of an opamp.	4				
CO3	Classify and comprehend the working principle of data converters.	4				
CO4	Illustrate the function of application specific ICs such as Analog multiplier, PLL and its application in communication.	2				
CO5	Explain the working of multivibrators using IC 555, the special function ICs such as Voltage regulators, buck-boost converters, A/V amplifiers etc.	3				
*Bloo	m's Taxonomy (RBT) Level: Remember-1; Understand-2; Apply-3; Analyze-4; Ev	aluate-

EC22408	MACHINE LEARNING: THEORY AND PRACTICES	L	Т	P	С				
		3	0	2	4				
COURSE OBJECTIVES:									
1. To lea	rn the basic concepts of machine learning.								
2. To lea	rn and build supervised learning models.								
3. To lea	rn and build unsupervised learning models.								
4. To eva	aluate the algorithms based on corresponding metrics identified								
5. To ana	alyse the machine learning experiments	<u> </u>							
UNITI	INTRODUCTION TO MACHINE LEARNING				8				
Review of Lin	near Algebra for machine learning; Introduction and motivation for ma	chine	e le	earni	ng;				
Examples of	machine learning applications, Vapnik-Chervonenkis (VC) dimensional	sion,	P	roba	bly				
Approximatel	y Correct (PAC) learning, Hypothesis spaces, Inductive bias, Gener	aliza	tio	n, B	ias				
variance trade	e-off.	<del></del>							
		<u> </u>			10				
UNITI	SUPERVISED LEARNING				10				
Probabilistic Bayes, Maxin	discriminative model - Logistic regression, Probabilistic generative r num margin classifier – Support vector machine, Decision Tree, Rando	node m Fe	el - ore	- Na sts	ive				
UNIT III	ENSEMBLE TECHNIQUES AND UNSUPERVISED LEARNING				9				
Combining m boosting, stac	ultiple learners: Model combination schemes, Voting, Ensemble Learn king, Unsupervised learning: K-means, Instance Based Learning: KNN	ing - I, Ga	- ba ius	aggir sian	ıg,				
mixture mode	els and Expectation maximization.								
UNIT IV	NEURAL NETWORKS				9				
Multilayer pe stochastic gra saturation (a normalization	Multilayer perceptron, activation functions, network training – gradient descent optimization – stochastic gradient descent, error backpropagation, from shallow networks to deep networks –Unit saturation (aka the vanishing gradient problem) – ReLU, hyperparameter tuning, batch normalization, regularization, dropout.								
UNIT V	DESIGN AND ANALYSIS OF MACHINE LEARNING EXPERIMENTS				9				
Guidelines for bootstrapping comparing tw	r machine learning experiments, Cross Validation (CV) and resampling , measuring classifier performance, assessing a single classification alg o classification algorithms – t test, McNemar's test. K-fold CV paired	; – K orith t test	K-fo nm	old C and	V,				
	L:	45 I	PE	RIO	DS				

#### **Practical Exercises:**

- 1. Write a python program to import and export data using Pandas library functions and data Visualization Techniques. (3 hours)
- 2. Demonstrate various data pre-processing techniques for a given dataset. (2 hours)
- 3. Implement Simple and Multiple Linear Regression Models(2 hours)
- 4. Develop Decision Tree Classification model for a given dataset and use it to classify a new sample. (2 hours)
- 5. Implement Naïve Bayes Classification in Python. (2 hours)
- 6. Implement Random forest ensemble method on a given dataset. (2 hours)
- 7. Build KNN Classification model for a given dataset. (2 hours)
- 8. Implement classification using SVM. (2 hours)
- 9. Implement classification using Multilayer perceptron(2 hours)
- 10. Implement of ADAM optimiser from scratch (2 hours)
- 11. Evaluating ML algorithm with balanced and unbalanced datasets Comparison of Machine Learning algorithms. (3 hours)
- 12. Performance analysis of specific datasets (mini project) (6 hours)

#### P: 30 PERIODS TOTAL PERIODS: 75

COUI	RSE OUTCOMES:	<b>RBT</b> *
Upon	successful completion of the course, students should be able to:	Level
CO1	Explain the fundamental role of ecosystems and biodiversity and discuss the importance of their conservation.	2
CO2	Describe the different types of pollution, their effects and strategies to minimize or eliminate pollution.	2
CO3	Identify the need of renewable and non-renewable resources and describe energy management measures to preserve them for future generations.	2
CO4	Explain the various goals of sustainable development applicable for suitable technological advancement and societal development.	2
CO5	Demonstrate the knowledge of sustainability practices and identify green materials, energy cycles and the role of sustainable urbanization.	2

FC22411	ANALOG INTEGRATED CIRCUITS AND SIMULATION	L	Т	P	C
	LABORATORY	0	0	3	1.5
COURSE OBJE	CCTIVES:				
1. To expo	se the students to linear and integrated circuits				
2. To unde	rstand the basics of linear integrated circuits and available ICs				
3. To unde	rstand characteristics of operational amplifier.				
4. To apply	v operational amplifiers in linear and nonlinear applications.				
5. To acqu	re the basic knowledge of special function IC.				
6. To use a	ny simulation software for circuit design				
LIST OF EXPE	RIMENTS				
1. Design of	of inverting and non-inverting amplifier using Op-amp.				
2. Design of	of integrator and differentiator using Op-amp.				
3. Design of	of instrumentation amplifier using Op-amp.				
4. Design of	of active low-pass, high-pass and Narrow band-pass filters using C	p-amp			
5. Design of	of Astable and Monostable multivibrators using Op-amp.				
6. Design of	of Schmitt Trigger using Op-amp.				
7. Design of	of Wein Bridge and Colpitt's Oscillator Using Op-amp.				
8. Applicat	ions of NE555 Timer.				
9. PLL cha	racteristics and its use as Frequency Multiplier.				
10. DC pow	er supply design using LM317 and LM723.	1			
11. Simulati	on of experiments 3,4,5,6 using any simulation software.

E (22412	DISCRETE TIME SIGNAL PROCESSING	L	Т	Р	С					
EC22412	LABORATORY	0	0	3	1.5					
COURSE OBJECTIVES:										
1. To implement DFT and FFT.										
2. To implement Linear and Circular Convolution.										
3. To design a FIR filter using windowing method.										
4. To design a	IIR filter.									
5. To study the architecture of DSP processor.										
LIST OF EXPERIMENTS										
Experiments using	g MATLAB									
1. Generation	of elementary Discrete-Time sequences									
2. Study of pro	2. Study of properties of LTI systems using Simulink									
3. Linear and	Circular convolution, Cross correlation of two sequences									
4. Discrete Fo	urier Transform (DFT) and Inverse Discrete Fourier Transform (	IDFT	)							
5. Radix-2 FF	Γ algorithms - Decimation in Time / Decimation in Frequency		, 							
6. Spectral est	imation through DTFT and DFT									
7. Design of d	igital Butterworth and Chebyshev IIR filter									
8. Design of F	IR filter (LPF/HPF/BPF/BSF) and demonstrates the filtering ope	eration	ı							
9. Processing	of an image : Representation, Histogram plot, Image filtering	1								
	IN THE ALK IS	1								
Experiments using	g DSP processor	1								
1. Study of arc	chitecture of Digital Signal Processor	1								
2. MAC applie	. MAC application in LTI systems.									
3. Generation	of various signals	1								
4. Design of F	. Design of FIR filter									
5. Implementa	tion of Up-sampling and Down-sampling	/								
Mini Project (Any	one)									
1. Noise cance	llation of audio signal									
2. Disease det	ection based on EEG/ECG									
3. Simple Ima	ge processing Technique

COURSE OUTCOMES: Upon successful completion of the course, students should be able to:						
CO1	Simulate standard signals.	3				
CO2	Demonstrate the applications of FFT in signal processing	3				
CO3	Design digital filters.	3				
CO4	Demonstrate their abilities towards DSP processor based implementation of DSP systems	3				
CO5	Implement signal processing applications in image and speech signal.	3
