Action Taken based on Stakeholder Feedback

7/8/23

S.NO	SUGGESTION	Action Taken
1	Introduction of Python Language	Almost all the companies are conducting first round technical assessment in C language. Certain Product based companies expect the candidates to code either in C/C++. C introduced in Semester 1. Python and C++ in Semester 2
2	More number of value added, short term courses may be introduced	Value added courses introduced as part of R2018 regulation as well as R2022 regulation
3	Students require more knowledge on industry standard processors/controllers like ARM processors/Controllers	Introduced in the course IOT
4	Should Do away with legacy subjects and bring in more on Data Analytics , AI & ML, More practicals on leading software etc..	Computational Intelligence, Machine Learning, Big Data Analytics, Deep Learning courses were introduced as part of R2018 B.Tech IT curriculum.
5	Practical relevance should be focused more	Case study and real time application were introduced in Unit V in most of the courses.
6	Try to get industrial based subjects practically (testing and development)	3 industry designed courses were included in the curriculum
7	Try to avoid saying cgpa is important and arrears are barriers. Motivate business ideas to student's who are interested towards business..... Thank you for providing us an extraordinary environment of collage life.....	Courses related to Entrepreneurship were introduced as value added course.
8	Should allow to work in core industries on final year without any restriction it will allow the student to make himself ready to adopt to the industrial environment easily and will be a quick learner .	Online courses were allowed to enable the students to work in the industry during final year
