10.	Overall Satisfaction of the Program				2	

Any other suggestions: Just change the course curriculum to meet industry standards and making students more research oriented would help them. The most important thing is change teachers who are egoistic and demotivating who themselves are half baked(mostly senior staffs) and hire someone who is really erudite and could understand students and motivate them to achieve great heights

10.	Overall Satisfaction of the Program			3		

Any other suggestions: The courses that were present in my time were good enough to get into a company. But many things has evolved and trends has changed in the industry.
My suggestion is "adopt to the current industry need"
For example: very few companies stick to c, c++ but almost of the companies evolved themselves to use the latest technology such as node.js, python, ruby, cloud technology, etc. Providing a good opening to these technologies will be a massive help to their future
And the coding practice should be increased among the students to develop their skills. I had to spend more time to increase my skills, but not everyone will consider that, but feel for it after the end of the course.

8.	Curriculum and courses inspired lifelong learning			3		
9.	Rate the evaluation schemes adopted			4		
10.	Overall Satisfaction of the Program			3		

Any other suggestions: It would be better to focus on a particular domain as per the individual's interest, so that it would be helpful to learn more about a particular technology rather having generic basic knowledge on all the domains.

Any other suggestions: Svce under Anna University was kind of outdated. We have excellent faculties with an amazing knowledge pool, sadly enough I personally felt it wasn't transferable due time and syllabus crunch. They still went out of the way and helped us to get inspired about subjects but only so much could be done by them with an outdated syllabus. Glad to see things are changing and we have a good scope of curriculum after we became autonomous.
Curriculum was not sufficient in regulation 2013, Important courses and programming languages were cut to mere units in a subject. It lacked depth so much, that faculties were generous enough to take extra effort for us. There is always a knowledge gap between industry and curriculum. If students can make an extra effort in doing real-time projects with the help of faculties, rather than just git cloning or just copy pasting stuff, it would benefit the students so much.

Any other suggestions: Electives were not provided based on individual choice, it was selected based on overall class's response. Even though Machine learning, AI subjects were available in Anna University syllabus during my year of study we were still not able to study those due to the choices of electives decided by class. It is best to provide industry required courses instead of focusing on overall pass percentage, atleast we can provide as choice for students who are willing to opt some tough elective courses which are in high demand in the industry.

Any other suggestions: To me, college can encourage students to intern during third year for 3-6 months and give credit for that. This will immensely help the student to be highly employable and as well as it will give him the exposure to the real world projects.
