From the students feedback report it is found that the curriculum need to focus on Industrial relevance and technical skills. The Assessments need to focus on Course Outcome measurement. More soft skill training programs need to organize.

The faculty feedback report reflects the overall curriculum aspect. We can infer it is good from the teacher points of view. Faculty need to elaborate about the Course Outcomes and attainment to the students. Teacher needs to be encourage on usage of modern tools.

The Alumni is the real stakeholder who will enjoy and or suffer the benefits of the Program. His feedback gives ample input for upgrading and fine tuning the curriculum to meet out the current demands of the market. Like student, he also suggests to review the evaluation process. It also shows, the students need to prepare with industry readiness.

The Employer feedback takes various parameters of the Curriculum which are directly felt by this stakeholder. The general feedback analysis shows that really pleasant. However it is need to focus on the teamwork activities and ethics.

Action to be taken:

1. To introduce Choice Based Credit System (CBCS) for the academic benefits and to improve multidisciplinary skills of the students.
2. Value added courses are to be introduced in various domains and thrust areas
3. Contents need to modify/introduce in the trust area subjects, after obtaining inputs from industry experts
4. Practical problem troubleshooting assignments and Multiple Choice Questions are to be incorporated under evaluation schemes.
5. Course duration and credits are to be balanced with course content.
